

SIMPLE 2-CHANNEL A/B AUDIO SWITCH

This is a simple 2-channel A/B TRS audio cable switch made from two switches, and six 1/8" (2.5mm) TRS phone jacks. Switches are simple TPDT A/B (i.e. Triple Pole, Double Throw) switches.

This switch box project provides the same functionality as a switchable A/B cable - One input source is routed to either of two output sources - OR - two input sources are selected to be routed to one output source.
